LTPDA Repository Interaction	3
MANTIS Issues	3
Detailed changes since v2.6.1	4

Introduction

This version of LTPDA is 2.7. This document lists the changes since V2.6.1.

Known Issues

On Mac OS X versions which use java 1.7 (on newer versions of MATLAB) there is an issue with the LTPDAprefs GUI when selecting paths of extension modules. There is a bug in the underlying java file-chooser widget which means there is an 'Open' button instead of a 'Choose' button. The result is that you can't select a directory but must, instead, select a file (for example the .xml file in the extension) then delete the filename from the path before pressing the + button to add the extension.

Main Changes

This version of LTPDA contains many under-the-hood improvements, particularly in the area of speed, and also some changes to the underlying data structures for analysis objects. In addition, a new test infrastructure is under development which includes a significant number of new unit tests. As a result a large number of bug fixes have been made.

Copying Objects

In order to make deep copies of objects, users should now use the `copy()` method rather than the old (and confusing) `copy` constructor. So, instead of

```
a = ao.randn(10,1)
b = ao(a)
```

users should now do

```
b = copy(a)
```

History context

When tracking processing steps the ‘context’ in which the current command is executed is captured in the history structure. For example, it may capture the name of the script or pipeline being executed. In a later release this may be used to group history steps in the history tree displays.

Function handle objects

Function handle objects have a new property ‘transform’ where you can specify a single or a list of functions that should be applied to the input objects prior to evaluating the function.

New Methods

- the `ao` class has a new method `subsData` which can be used to replace segments of a data series in different ways.
- the `ao` class has a new method `cgfill` which can replace segments of a data series with constrained gaussian noise generated from an input spectral model.
- the function handle class (`mfh`) has a new bounded non-linear least squares search (`fminsearchbnd`). This can be considered a beta version as it doesn’t yet return error estimates.
- the `ao` class has 4 new convenient filtering methods: `lowpass`, `highpass`, `bandpass` and `bandreject`.
- there is a new `ao` built-in model which computes a set of notches in the frequency domain (`ao_model_notch`)
- the `matrix` class now supports element-wise power operations. For now it only supports for `X = matrix.^scalar`.
- the `ao` class has new setters and getters for accessing or setting the axis labels on the underlying data structure. See `setXaxisName`, `setYaxisName`, `setZaxisName`, `xaxisname`, `yaxisname`, `zaxisname`

Changes to methods

- `ao/polyfit` now returns error estimates (assuming uncorrelated inputs)
- in `ao/iplot` the provenance info patches can now be disabled in the plist
- `ao/setPlotinfo` now accepts an empty array to allow the user to clear the `plotinfo`
- the built-in `ao` model `retrieve_in_timespan` has a new `dryrun` parameter which just reports on whether the request will result in any objects.
- `mfh/fminsearch` now returns error estimates if the original data model is input in the plist.
- `timespan/plot` has been improved to allow the boxes representing the timespans to be transparent so they can be overlaid on other data plots.
- `ao/iplotyy` has been updated to work properly with the `plotinfo` objects.

LTPDA Repository Interaction

This version of the toolbox has some new utilities for querying LTPDA repositories from within MATLAB.

- `utils.repository.report` dumps the records of a database to a file
- `utils.repository.existObjectInDB` checks if a given name exist in the database table `objmeta.name`. It is also possible to specify for AOs with time-series a time-span.

MANTIS Issues

ID	Status	Summary
0000658	resolved (martinhewitson)	Iplot does not work as documented / plotinfo objects overrule manual plot settings
0000656	resolved (ingo diepholz)	ao/search should warn of failure
0000660	resolved (martinhewitson)	A report method for get_data step of pipelines
0000662	resolved (martinhewitson)	Warnings about telemetry parameters alias
0000668	resolved (martinhewitson)	Applying Yranges on multiple iplots
0000666	resolved (martinhewitson)	Manual is not accessible online
0000647	resolved (ingo diepholz)	Test mode in retrieve in timespan
0000665	resolved (hueller)	ao.polyfit does not calculate errors for the estimated coefficients
0000661	resolved (martinhewitson)	An easy way to access names of LTPDApipeline telemetry parameters
0000659	resolved (martinhewitson)	Release notes are not accessible/file is damaged

0000650	resolved (martinhewitson)	Mantis doesn't allow to select product version 2.6
0000664	resolved (hueller)	pest class needs a y method
0000655	resolved (martinhewitson)	iplot for aos from (older version) files is broken
0000653	resolved (hueller)	simplifyYunits does not like kg and does not scale errors

Detailed changes since v2.6.1

 [2013-10-31 05:59:39 +0100][50c435f] Mauro Hueller
 Bug fix: the weighting needs to be there for the case where the user provides data with uncertainties. If not, we do not get results in agreement with the textbooks formula for the linear LSQ.

Rebuilding a single filter-object from a parfrac-object returns now only one filter-object.

```
m-toolbox/classes/@miir/redesign.m | 9 +-----
1 file changed, 1 insertion(+), 8 deletions(-)
```

[2013-10-24 13:27:17 +0200][32d2cdc] Ingo Diepholz
Merge remote-tracking branch 'origin/master'

[2013-10-24 13:26:58 +0200][eb6b24a] Ingo Diepholz
Use the 'index' key for indexing the output filters. This is mainly necessary for rebuilding the outputs.

```
m-toolbox/classes/@miir/fromParfrac.m | 7 ++++++
1 file changed, 7 insertions(+)
```

[2013-10-24 13:26:02 +0200][5fb3fe7] Ingo Diepholz
Add an additional key for the parameter set 'from parfrac' to index the output filter. This is mainly necessary for rebuilding the history. Without indexing creates each single output all outputs. For example a parfrac-object creates three filter-objects. If we rebuild one object then rebuilds each single object three output-objects. That means we have at the end 9 filter-objects

```

1 file changed, 6 insertions(+), 7 deletions(-)
```

[2013-10-23 13:57:39 +0200][1a07154] Ingo Diepholz
Remove the clc() command because this will clear all other outputs if the user run all the tests with the run_tests() command.

m-toolbox/test/test_isequal.m | 1 -
1 file changed, 1 deletion(-)

[2013-10-23 13:45:02 +0200][c5548fc] Ingo Diepholz
Remove the test test_ssm_setParameters because this test requires that the user have the extension module LPF_DA_Module installed.

m-toolbox/test/test_list.m | 11 +++++-----
1 file changed, 5 insertions(+), 6 deletions(-)

[2013-10-23 13:40:12 +0200][4396720] Ingo Diepholz
Merge remote-tracking branch 'origin/master'

[2013-10-23 08:15:45 +0200][f233363] Martin Hewitson
OK, this ugly old code suffers from the recent change to plist/find but I think it's better to make another fix here - essentially this code is assuming that one of the plist parameters is a cell array or a string, but if it turns out to be an empty double, then a piece of the code fails. So I add a default value of {} to that parameter.

m-toolbox/classes/@ssm/modelHelper_declareParameters.m | 2 +-
1 file changed, 1 insertion(+), 1 deletion(-)

[2013-10-23 08:04:22 +0200][c0a2c59] Martin Hewitson
This now does a better job of plotting timespan boxes and allows them to be transparent so that they can be simply plotted on top of other data.

m-toolbox/classes/@timespan/plot.m | 33 ++++++-----
1 file changed, 27 insertions(+), 6 deletions(-)

[2013-10-23 08:03:33 +0200][8370287] Martin Hewitson
It's too restrictive to insist the default be empty: a perfectly reasonable (empty) default value would be {}, for example.

m-toolbox/classes/@plist/find.m | 2 +-
1 file changed, 1 insertion(+), 1 deletion(-)

[2013-10-22 18:46:32 +0200][2b2e950] Martin Hewitson
Add callerIsMethod logic to increase speed a little.

m-toolbox/classes/@ao/double.m | 8 +++++++
1 file changed, 8 insertions(+)

[2013-10-21 16:08:06 +0200][f2747e7] Nikos
Small bug in iplotyy. Copied the fixlabel function from the iplot, as it is

```

[2013-09-04 16:56:00 +0200][739c17b] Ingo Diepholz
Remove the property 'configPlist' and add instead the property 'argsIn'. With the property 'argsIn' are we more flexible because now is it also possible to define input arguments which are not a PLIST. Like for setter methods a string 'my new name'.

Add a try-catch command for backwards compatibility. My measurements showed me that the try-catch command doesn't cost time. Here the result
Runtime BEFORE the changes (1000 times with the command utils.prog.issubclass('mfir', 'ltpda_obj')) 6.265093 seconds.
Runtime AFTER the changes (1000 times) 4.690557 seconds.
6.358980 seconds.

seconds. 4.700332 seconds. Here the runtime if I store the super class in a variable
(only R2011a version) 4.683130 seconds. 4.703291 seconds.
