<b>Requirements</b>	<b>2</b>
New Methods	2
Changes to methods	2
<b>MANTIS Issues</b>	<b>3</b>
<b>Detailed changes since v2.7.1</b>	<b>4</b>

## Introduction

This version of LTPDA is 2.8. This document lists the changes since V2.7.1.

## Known Issues

On Mac OS X versions which use java 1.7 (on newer versions of MATLAB) there is an issue with the LTPDAPrefs GUI when selecting paths of extension modules. There is a bug in the underlying java file-chooser widget which means there is an ‘Open’ button instead of a ‘Choose’ button. The result is that you can’t select a directory but must, instead, select a file (for example the .xml file in the extension) then delete the filename from the path before pressing the + button to add the extension.

## Main Changes

This version of LTPDA contains many under-the-hood improvements, particularly in the area of speed, and also some changes to the underlying data structures for analysis objects.

In addition, a number of deprecated GUI tools (including the workbench) have been removed from this version. These have been unsupported for a few versions now, and continued maintenance is no longer possible. The user manual, and in particular, the training sessions, have been updated to reflect this. Some of the functionality pertaining to the repository interaction, has been grouped together into a single GUI called [LTPDARespositoryQuery](#).

The linear fitting methods, namely `ao/linfit`, `ao/bilinfit`, `ao/polyfit`, `ao/polynomfit` and `ao/lscov` went through a substantial rewrite in order to ensure the uncertainties in the input data are properly handled, and correctly contribute to the uncertainties and covariance matrix of the output parameters.

## Requirements

A number of changes made required us to change the minimum MATLAB installation requirements to

Software	Version
MATLAB	7.12 (R2011a)
Signal Processing Toolbox	6.15
Symbolic Math Toolbox	5.6
Optimisation Toolbox*	6.0

## New Methods

- `ao/poltfitSpectrum` A new tool which offers an alternative way to fit a smooth model to a spectrum. The method works by fitting a polynomial to the log of the x and y data in the input spectrum.
- `timespan/tohtml` displays an array of time-span objects in an HTML table.
- New setter methods for AOs: `ao/setEnbw`, and `ao/setNavs`.
- There is a new AO built-in model for building pulse-trains (`help ao_model_pulsetrain`).
- `ao/edgedetect` is a new method which detects edges in a binary pulse train.
- `ao/pad` allows padding an AO with a particular value.
- `ao/cast` allows you to cast the values in an AO to another data type.
- `matrix/double` returns a matrix of doubles created from the internal objects.
- `ao/simplifyZunits` simplifies the z-units of the AO.
- `ao/simplifyXunits` simplifies the z-units of the AO.
- `timespan/merge` can merge multiple timespans into one.
- `ao/detectOutliers` detects outliers in a time-series.

## Changes to methods

- `ao/iplotyy` has been rewritten to allow for many new features, including plotting of multiple objects on each of the two axes.
- In all AO constructors, you can now specify a 'timespan' plist key, passing a timespan object which will then be used to split the data before returning.

- Reading from data files with the AO constructor now allows for some header lines to be skipped.
- `pest/jtable` displays the values in the parameter estimate object in a table window.
- `pest/table` displays a `pest` object at the MATLAB command prompt.
- We have new methods to set the marker face and edge colour on all user objects. We also have a method to set if the marker should be filled or not.
- `ao/iplot` subplots are now linked when zooming.
- `ao/dft` now estimates errors based on the frequencies surrounding the target frequency.

## MANTIS Issues

<b>Id</b>	<b>Summary</b>	<b>Status</b>
737	skip the printout of the error and units titles when these are empty.	resolved
720	warnings from bin_data	resolved
732	Giving a 'name' to the window of an iPlot	resolved
707	iplotyy should accept a vector of two objects	resolved
748	iplot fails for bar plots	resolved
747	giving a name to a figure	resolved
744	An option in ao/consolidate not to be truncating to the shortest data set	resolved
722	toSI converts [Hz] into [s]	resolved
719	Remove unused/old/broken GUIs	resolved
714	showErrors field in the plotinfo objects is ignored by ao.iplot	resolved
713	The plotinfo constructor via plist is incomplete	resolved
726	A method to join/merge timespan objects	closed
727	A search method for collection objects	closed
731	iplot not showing titles in fsdata plot	closed
700	ao/spikecleaning leaves ao one sample short	closed
715	built-in model information only contains 1st version	closed
708	iplotyy should accept a parameter to change the axis range	closed
706	ao.lincom should be implemented as a wrapper of ao/plus and ao/times	closed
705	Bug division and multiplication uncertainty propagation	closed
704	ao/linfit does overwrites dy in input aos	closed
703	Lack of GRS electrostatic built-in model parameters	closed
702	HetSegsFreqs does not fully support heterodyne with cuts	closed

701	Phi torque estimation uses wrong default parameters for stiffness	closed
699	addvalue method missing	closed
698	An utility to fit spectra with polynomial low	closed
697	Review issue with ao/split	closed
696	timespan.toHtml method needed	closed
695	ao/split to match AOs	closed
694	missing ao/simplifyXunits	closed
692	ao class supporting specification via object supporting char	closed
691	ao.split should support an array of timespan objects	closed
688	stoc.misc.readExecutedTimeline crashes while reading 20131115_319_executed_timeline.txt	closed
687	heterodyne and pipe.heterodyne show inconsistent behaviour	closed
684	Remove LTPDAWorkbench message handling from main toolbox	closed
683	utils.const.msg function with no \newline needed	closed
681	parameter list help on plotIntervals do not work	closed
680	Improve utils.helper.warn and .err	closed
678	ao.linfitt could be implemented as a particular case of ao.polynomfit	closed
677	ao.polynomfit errors for the case of no errors provided	closed

## Detailed changes since v2.7.1

[2014-05-27 07:22:11 +0200] [894d5f3] Mauro Hueller  
Updated a bit

I believe the applyDefaults was used in the wrong part of the code. So I moved it and cleaned up
the logic a little.

When specifying an interval [a,b] in steps of d using the colon operator (a:d:b), MATLAB generates the first half of the interval using a+x\*d and the latter half using b-xd, where x is a natural number. BUT in LTPDA we use a+x\*d for the complete vector.

[2014-04-22 16:55:52 +0200] [b8381db] Martin Hewitson  
Rather than using the wrapper, we implement the simple search code here. This avoids calling the ao/search method on each internal object, so it's much faster, and it also makes it a little easier to keep track of the names in the case of collection object searching. But, this is still not so nice, and there is code here trying to guess which subclass is calling this. Instead we could try the same trick as in wrapper (which calls wrapperEval implemented in collection and matrix) and make a searchEval to get the core functionality which is special for each container subclass.

It is not necessary for persistent variables to check if they exist (exist('pl', 'var')). It is enough to check if the variable is empty because the command "persistent pl;" already predefine the variable with an empty array.

We have a general case in this function if the m-file name contains the string '_model_'. In this  
case do we not add history because we assume that we are inside a model. But this is too general  
because we also have a TestCase with the file name test_ao_model_LTPVisualize and here do we need  
the history. --> I have created a exception for the test cases.

xaxisDataWillChange() method is only necessary for the case that we have evenly sampled data and  
the user want to set 'dx'. The ltpda_vector() class can not keep the shape of the y-axis because  
there are no x-values who have the shape of the y-values. Only here in the data class (data2D-  
class) do we have access to the shape of the y-values.

Bug fix for setting 'dx' and that the x-values are empty. In this case it is not possible to keep
the shape of the x-axis because there is no shape. I have fixed this by using the same mechanism
for setting the x-values. 1) I call a method (xaxisDdataWillChange) which checks if the input
values have the right data type. 2) I set the value 3) I check if the shape of 'dx' is the same as
'y' and expands a single value to the size of the y-values.

Overload num2cell for mfh class because indexing doesn't work for single mfh objects. e.g. obj = mfh(); --> obj(1) will invoke eval because of mfh/subsref(). The MATLAB code uses the command: c{i} = a(i); and we need a special case if 'a' is a single mfh-object.

[2014-03-26 14:11:50 +0100][db02fb8] Ingo Diepholz
Bug fix: c(2) = collection() was broken. The built-in command for subsasgn is: A = subsasgn(A, S, B); Where 'A' is the input- AND output collection-object. But if we use the command: c(1) = collection(); then is 'c' pre-defined as an empty double. In this case tries MATLAB to convert the 'B' (a collection-object) into a double which doesn't work. That means we have to initialise the empty 'A' with an empty collection-object.

[2014-03-25 15:34:51 +0100] [6dcc412] Ingo Diepholz  
Kind of bug fix: It is necessary that the ltpda_container object is the first input argument. This  
worked before because methodName (a String) doesn't have a method named wrapperEval. But it is  
safer to have the right order.
```

```
m-toolbox/classes/@collection/wrapperEval.m | 2 +-

```

```
-----  
[2014-03-25 15:29:00 +0100] [7f7dc7c] Ingo Diepholz  
Make the 'wrapper' method more flexible. At the moment can the wrapper/wrapperEval method call  
methods of the inner objects only with a PLIST as an input argument. But with this change is it  
possible to pass also the other input arguments (e.g. a String) of the ltpda_container method to  
the method of the inner objects.
```

```

According to my understanding of Matlab's lscov and to my tests, this scaling is needed only in the  
case the user did input weights or covariance.

```

---

[2014-03-06 13:08:58 +0100] [f071a7d] Ingo Diepholz  
Bug fix: We have in the classes: ltpda\_data, data2D and data3D two getter method for getting the units. One is the e.g. xunits() which we need for backwards compatibility and the other is getXunits() which is new since the new ltpda\_vector class. The issue is that it doesn't make sense to maintain two method and so is getXunits() just a wrapper of xunits().

```
m-toolbox/classes/@data2D/getXunits.m | 16 ++++++-----  
m-toolbox/classes/@data3D/getZunits.m | 16 ++++++-----  
m-toolbox/classes/@ltpda_data/getYunits.m | 14 ++++++-----

Because of the MANTIS issue 719 is the LTPDA object explorer not longer necessary. MATLAB can do the same with using the command `openvar('varName')`

---

[2014-03-03 16:35:04 +0100] [3cd55c4] Ingo Diepholz

I found a nicer way to reset persistent variables inside a single function. The general command is: "clear FUNCTIONS" but in case of function inside a package we must define the whole function path. e.g. "clear +utils/@helper/msg\_nnl"

A wrapper for genvarname because the function 'genvarname' will be replaced in MATLAB R2014a by the function 'matlab.lang.makeValidName'. But we support also older MATLAB version and that means we have to wrap this function. This function calls depending on the MATLAB version the right command.

Bug fix (sort of). Adding objects to multiple input collections doesn't make sense, and with that in place it's not possible to add collections to collections (because they were all being collected as inputs). This simplification of treating the first input collection as the one we will add to means it's now possible to add collections to a collection.

Rather than maintaining two almost identical functions we call addHistory() from addHistoryStep(). To make this work, we need to make addHistory() public and I choose to make it hidden. Also, we need to move the override in ltpda\_algorithm so it has the same access status. Now, I don't think addHistoryStep() is actually needed anymore - it was provided to allow users to make their own functions, but this was before we had extension modules, it was then used in the old built-in model format, but no longer.

```

Merge remote-tracking branch 'origin/master'

[2013-12-03 13:45:49 +0100] [e3c0c86] Ingo Diepholz  
It is not necessary to check in anyListInput(ts, testData, testAlgo, addArgsIn, exceptionList) the  
number of outputs because we do this also in chkNumInputEqOutput()
